The popularity of the newer Daylilies is not surprising. Their ease of growth, the dependability of the plants, and the beauty of the flowers is causing more people each year to steadily increase their planting of these lovely flowers. With larger and finer flowers appearing in new colors, their use is widely extending. Start growing them, and you will become a daylily fan for life.

The flowers are in bloom from the middle of May until the 10th of August in our locality. Many listed in Eastern catalogues as blooming in Aug. and Sept. bloom in July in our garden. This year a number of Clint McDade's have been added, which bloom in August and September.

Several kinds often bloom again in fall, and are marked "X" before the price. Daylilies need sun at least half a day for bloom, and grow best in a sunny location. While they will bloom in hot and dry weather, an occasional watering will produce larger and finer blooms. Allow 2 ft. between plants for normal growth. Place the crown a little below the surface, when you plant them; and spread out the roots. Any good fertilizer will help growth and bloom. We have been growing most of the plants in compost, and this induces a good root growth.

FRAGRANCE: All the evening bloomers and the lighter yellows (0-5) are fragrant. Apricot and Winsome are early bloomers. Among the deeper toned later yellows are Gold Coast, Golden West, Ophir, Riviera, Soudan and Sir M. Foster. It is seldom found in pink or red shades.

COLOR LISTING: Varieties are placed in color groups. Few people have color charts, and do not know the depth of color from the descriptions. Yellows come in several tones, some greenish as barium or citron yellow, others lemon in color. Then there are pure yellows, as amber, empire and chrome, and some have a touch of gold or orange in their make-up. As the Betscher hybrids are well known, and have a wide color range in the yellow and orange shades, they were used as a basis for depth of color, and begin with "1". Flowers lighter in color are marked "0" or "00" for a paler shade. Other varieties having the same color number may be entirely different in form, size of flower, and height, also in the color range. The numbers are used only to help you select different shades in color. Since this procedure may be difficult to use with pink or red shades, and some color patterns, we are using another plan. These varieties will be marked L. M. or D. before the name, indicating whether they are light, medium or dark in general coloring. Advise if this method is helpful to you.

TRANSPORTATION: Strong, single divisions are sent postpaid. Not small plants that will not bloom. If heavier plants of the less expensive varieties are wanted, have them sent express collect, or enclose extra postage. Larger plants make a better showing. Local orders can be dug any time, if the weather allows, but those for shipping are sent only in early spring until mid-May, and after the blooming season until mid-Oct. Those listed for fall delivery are sent after the end of August. No orders are accepted under \$2.00. Ohio purchasers, please add sales tax.

SEEDLINGS: Each year new varieties are developed, showing improvements in form and color. Of these, only a few are set aside for further testing. Do you want a thrill? Then try some, all will bloom this year. You will receive colors that are not possible in named varieties offered at the same price. Only sent after the blooming season.

FINE MIXTURE: Includes all colors in a balanced mixture, 8 for \$2.50 postpaid; 20 for \$5.00; 50 for \$10.00, express collect.

LOW VARIETIES: A number of brilliant colors appear in this group, that are 20 inches or lower in height. A few available at 8 for \$3.00 postpaid. Order early.

ARISTOCRAT SERIES: An extra fine selection, labeled as to color. 6 diff. for \$3.00; 12 diff. for \$5.50 postpaid.

NEW INTRODUCTIONS

These seedlings have been carefully selected as being distinct and better than known named varieties. We have tried to keep prices at a level most people can pay. Good plants sent. Two descriptions are given for these and other new varieties. The colors are taken from Ridgeway's chart for the first description, and are intended only for those who want exact colors. The second one gives the general color, as you see it in the garden. Some distinct pale yellows were introduced, as these colors are very popular with women.

1950 - Solferino only can be sent in spring. Of the others, only a few of each are available, and prices are net. Shipped after the blooming season.

- L ADMIRABLE - 36" July-Aug. A 6½" bloom with petals 1½" wide. The petals are an ochraceous buff, closely veined and flushed light Pompeian red, broad light band of same color. Lemon throat, with a greenish center. Sepals have a pale edge of rosy tone. A broad slightly reflexing flower of Pompeian old rose, with a decided pink tone. \$5.00
- D INTENSITY - 36" July-Aug. Flowers 6½" across and petals 1" wide. A very brilliant velvety dark maroon, with an iridescent gold underlay. Star-shaped cadmium throat. Unfading at 6 P.M. Everyone wanted this. \$7.50
- O SOLFERINO - 48" July-Aug. A lily-like flower with overlapping petals and fluted edges, 5½" across, and petals 1½" wide. Lemon yellow, with a deeper center and green throat. Larger and broader than Sunny West, with good substance. \$3.00
- M THUNDERCLOUD - 42" July-Aug. Flower 7" across, and petals 1½" wide. Color is rather hard to describe. Petals rosy ferruginous, with heavy v-shaped hands of velvety liver brown, pale mid-rib. Sepals same shade, flushed a deeper color. Large green throat. An unusual tone of light rosy brown, with a blackish band, widely open segments. Always attracts attention. \$5.00

The following varieties have been introduced from 1943-49.
